Opis produktu

Soundcraft Mix Stagebox 16i

Compact digital stagebox that combines high-quality components with a streamlined design, making it easy to add multiple channels of remote-controlled I/O to the Soundcraft's Si-series mixing console. 16 Studer-designed mic preamps provide exceptional sound quality and warm, rich sound, while the compact form factor offers easy transport and fast configuration. Ideal for live engineers, houses of worship, bands, club owners and corporate installations, it allows user to replace heavy, expensive analogue snakes with a single RJ45 Cat5 style Ethernet cable for 100m runs between stage and mixing console. Dedicated XLR mic pre inputs allow 16 simultaneous channels of external analogue input. This model also offers eight analogue outputs for easy connection to house and stage monitors and broadcast or streaming feed. A streamlined design provides essential connections and features, including single MADI over RJ45 connectors built right onto the chassis. No local hardware configuration or installing option cards are required - simply plug in, power on, select inputs and control remotely using a Soundcraft Si console. This stagebox pairs with Soundcraft Si Series mixers to provide remote controlled expanded I/O and intuitive operation during complex mixing scenarios. Si Impact allows owners to add a stagebox for additional inputs, while simultaneously using the existing console inputs. By adding a second MADI option card to the console, customers can add a second stagebox and select which inputs to assign to the 80 mixing channels. Dimensions: 2U rack mount design.
